Fields of Expertise

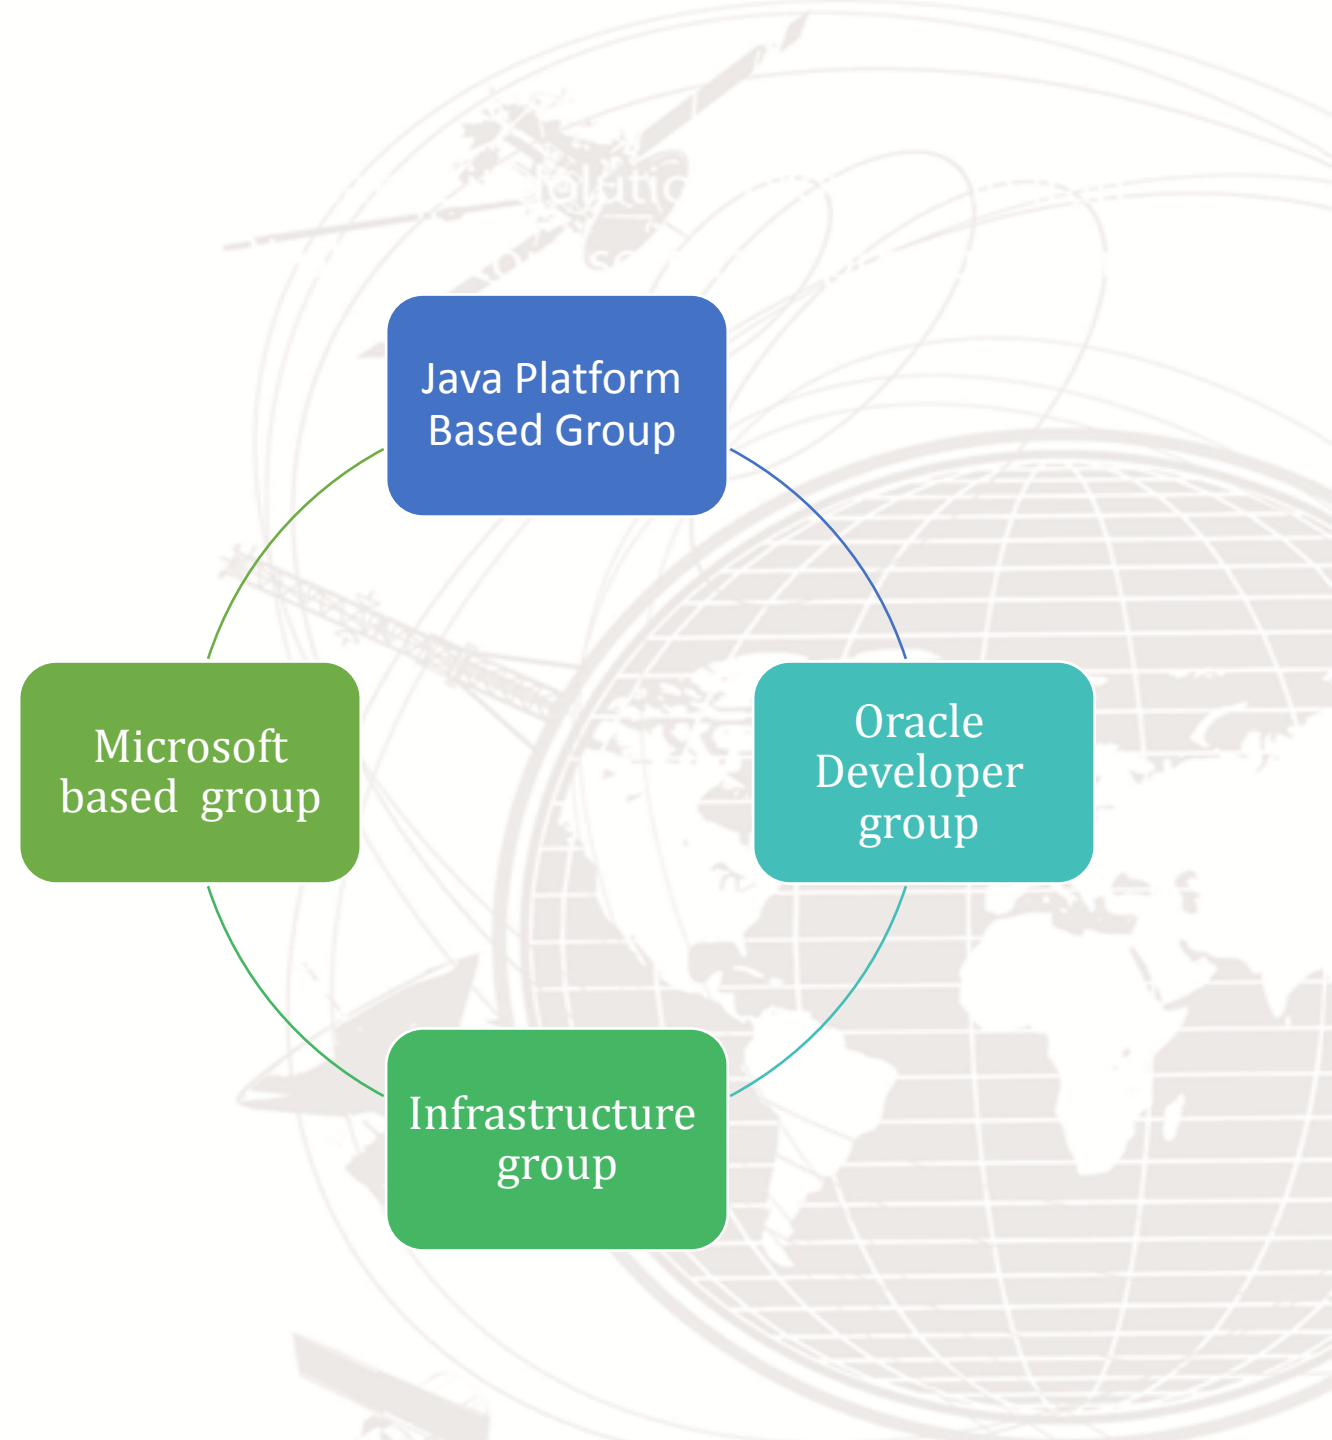

Development & Maintenance of customer's software

To create efficient software with suitable quality, generation process based on engineering methods and world-class methodologies have been applied.

Behpardaz Jahan is honored that has participated in some large scale and national projects and has successfully accomplished them.

Regarding customer ordered software, we have the following divisions:

The most reliable it dolution provider in iran
The most credible custom software producer in iran

Mobile Application Development Department (IOS and Android)

Mobile Application Development Department (IOS and Android)

Mobile app department in Behpardaz Jahan has several years of experience in designing, development and deployment of efficient mobile applications. The main services of this department include:

- Back-end system design for mobile applications
- Front-End mobile application design
- Mobile app optimization Services
- Mobile app test and deployment

Back-end system design for mobile applications

Consultancy, analysis, design and implementation of API-centric systems to reduce the time and the budget of the project based on the micro-service architecture model.

Solution design and implementation of scalable mobile applications with large number of audiences.

Solution design and implementation of back-end systems with in-memory database suitable for instant communication mobile applications

Front-End mobile application design

- Deliver across the entire app life cycle including:
 - Conceptual modeling of app
 - UI and UX design
 - API optimization and API bundling
- Analysis and Design of mobile applications
 - Requirement engineering and prototype design
 - Standard solution recommendation based on best practices and platform oriented system design
 - End2End system optimization
- Design and Implantation of platform and communication based applications
- Gamification design of mobile application
- Design and optimization of user experience
- Consultancy on communication applications based on the following platforms:
 - XMPP for messaging applications (ejabberd- openfire)
 - Socket.io for async mobile
 - SignalR for intelligent notification in enterprise projects
- Improve the app UX based on Instant response design
- Async and sync API design for saleable application

Mobile app optimization Services

- Optimizing the memory usage
- Optimizing the energy usage
- Monitoring of mobile resources
- Securitize the mobile app

Mobile app test and deployment

- Monitoring of Network Communication
- UI and UX test
- Performance test

The most reliable it dolution provider in iran
The most credible custom software producer in iran

IOTEL

IOTEL

- Open Architecture system to deliver services for organizations and individuals
- Integrating all information services in your organization in only one mobile application
- Connecting both public and organizational services
- Designed based on messenger applications which creates an experience of ease
- Platform for offering 3G and 4G services
- Open architecture design which permits later developments
- Supports OAuth 2.0 protocol for authentication
- Supports web and Android
- Capable of pricing the services in order to enter the service market

The most credible custom software producer in iran

Enterprise Aviation Solutions

Enterprise Aviation Solutions

Due to global developments in the field of air transport and related aviation software, and based on market needs, “Behpardaz Jahan” decided to enter this field and develop enterprise integrated software.

This is done by using of aviation experts and considering the best practice systems in global world.

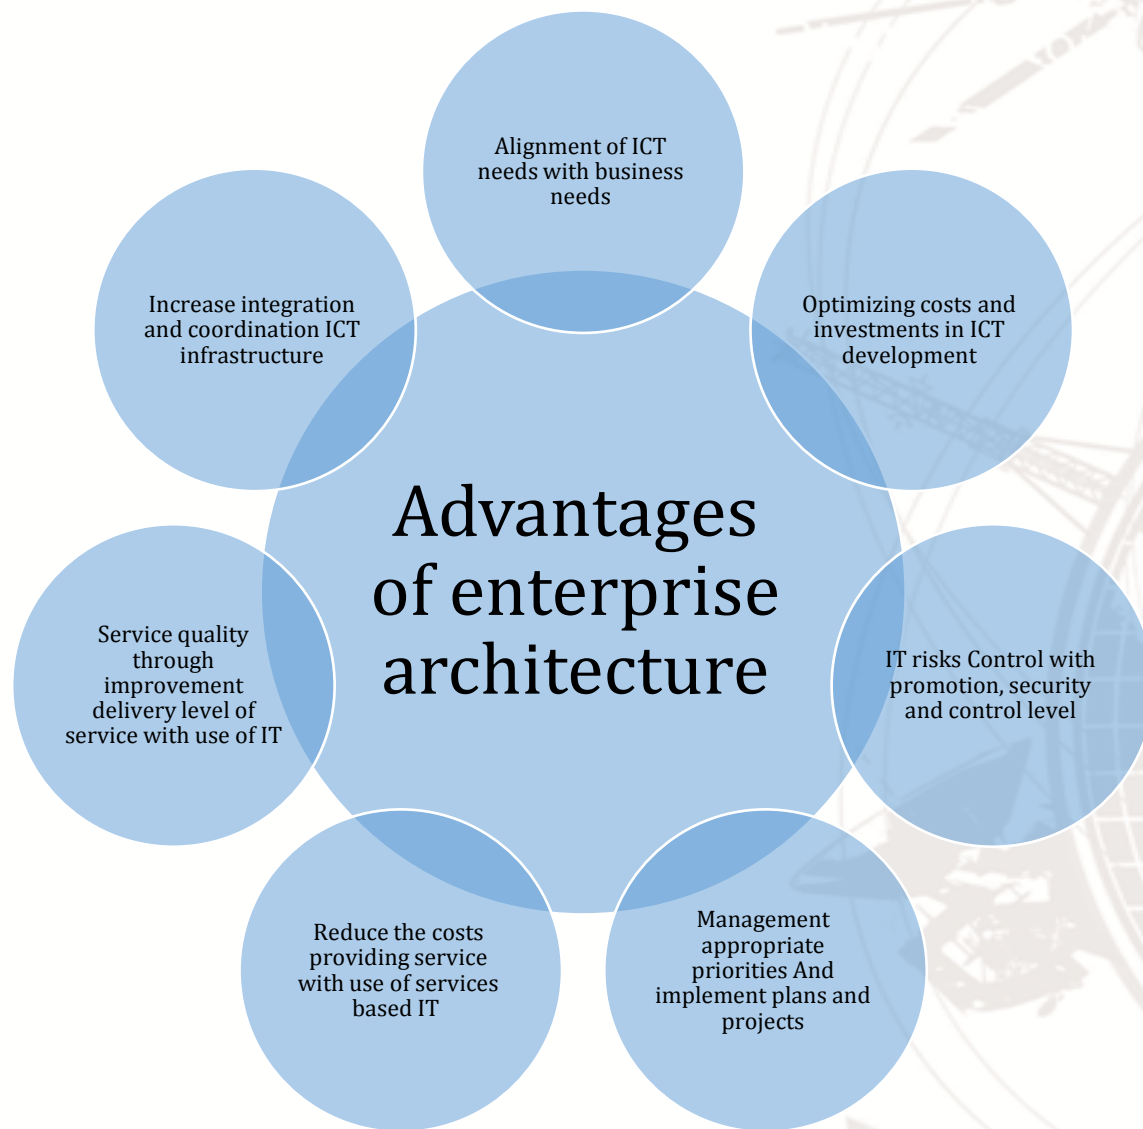

In this regard, the company produced comprehensive aviation systems.

Enterprise Aviation Solutions(continued)

- Airlines comprehensive system to manage and maintain airlines processes.
- Airports comprehensive system to manage and maintain airports processes
- Departure Control system (BDCS) is fully indigenous system aimed at computerizing the process of Passengers Check-in and Boarding at airports for both airlines and handling companies.
- Comprehensive maintenance (MRO) system is designed and implemented as a quite indigenous aviation system that aims to manage the maintenance processes for aircraft, helicopters and etc. for both airlines (CAMO division) and third-party maintenance companies in aviation field.

Enterprise Architecture:

Portal and service-oriented infrastructure software

The need to create a platform for interaction between Legacy Application in the organization

The need to establish community systems

The need to develop agile systems and self organizing systems

The need to create systems with open architecture

The need to implement single window concept in the different scales from single user to e-government

Need to create a platform for integration at the enterprise community level (e-health, e-commerce, e-government)

- ✓ Behpardaz Jahan has designed and developed service oriented architecture software infrastructure. This is based on open architecture pattern and supports distributed architecture.
- ✓ This architecture is designed based on standards and service-oriented architecture (SOA) that is applicable to the architecture of most systems. In this regard, software components can be Added, removed or be replaced without main framework changes.

IT Education

One of the goals of Behpardaz Jahan is training expert manpower in the information technology field. In this regard, FANPARDAZ higher education institute has been established under supervision of research, science and technology ministry. This institute celebrates application- short term higher education courses in the related topics to management and information technology.

IT Consultation Service

One of the main activities of Behpardaz Jahan is consultation in comprehensive plans. Some of the services that are offered in this area:

- Consulting in the field of definition method and projects execution
- Consulting on policy making and information technology planning
- Consulting in the area of buying hardware and software systems
- Advice for selecting the appropriate architectural pattern

Research projects

BEHPARDAZ JAHAN has an expert team in order to doing research projects in various fields. Some of these projects are listed:

- Research and Feasibility study on establishing software park in country
- Comparison among famous DBMS
- Assessing and comparison between different methodologies of producing systems
- Research on processing population and houses census - 2005

EPC projects in the field of Information Technology

According to the background of our company in software projects and great experiences in Information technology management, we can perform EPC projects with a high quality and design, based on collaboration with our international branch.

One of the EPC projects which has been done in our company is related to providing and configuring some electronic services for e-government in 2011.

In this regard, Behpardaz Jahan has concentrated in the following areas:

- Solutions for implementing identification projects by radio frequency (RFID SOLUTION)
- Solutions for implementing physical security projects
- Solutions for implementing security for card reader(smart card) systems

Retailing international software solutions with license and support services

Through its subsidiary (International IT House), Behpardaz Jahan offers global software and solutions with the necessary licensing and backs it with its world renowned customer support service. In this segment there are several hardware and software resources.

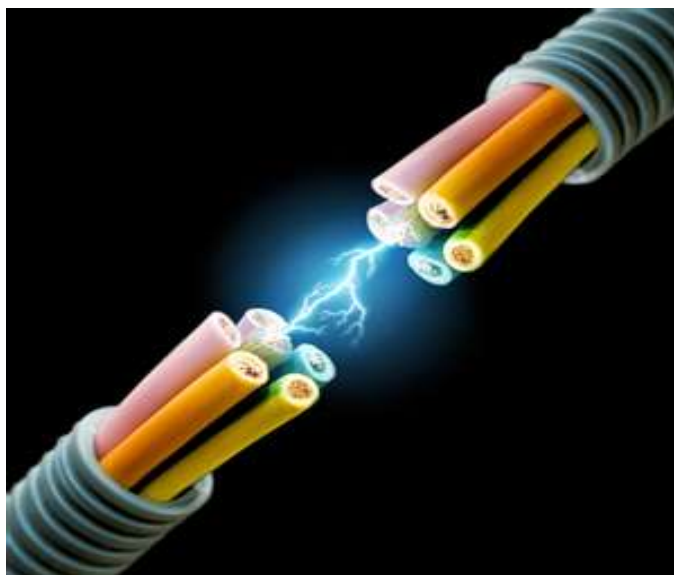

Planning and implementation of network infrastructure:

With having the first grade in Computer & telecom data Network:

BEHPARDAZ JAHAN has accomplished big projects in both public and private sector.
